2019 INTERNATIONAL POLLINATOR
HEALTH CONFERENCE

July 17-20, 2019

The 4th International Conference on Pollinator Biology, Health and Policy

2019 THEME

“Multidimensional Solutions to Current and Future Threats to Pollinator Health”

2019 International Pollinator Conference will be highlighting recent research advances in the biology and health of pollinators, and linking these to policy implications. The conference will cover a range of topics in pollinator research, from genomics to ecology, and their application to land use and management, breeding of managed bees, and monitoring of global pollinator populations.

For each session we will also develop policy briefs, which will summarize key knowledge on relevant topics and we will offer suggestions for how these can inform different aspects of legislation, regulation, and practice to improve bee health.

Stats

2016 Conference Held at Penn State

200+ Participants

20 Speakers

15 Different Countries

Representing universities, government agencies, industry, non-profit organizations, and several stakeholder groups.

Conference Includes

Invited talks, contributed talks, poster sessions on diverse topics including discussion on urban beekeeping, mapping pesticide effects from genes to landscapes, multidimensional approaches to pollinator pathogens, and technologies for monitoring and managing pollinator populations to improve pollinator health and crop pollination, and integrated pest and pollinator management.

Two World-Renowned Keynote Speakers

**Dr. Christina Grozinger, Distinguished Professor of Entomology;
Director, Center for Pollinator Research, Penn State University**

Christina Grozinger is Distinguished Professor of Entomology and the Director for the Center for Pollinator Research at Penn State, and a Fellow of the Entomological Society of America. Grozinger uses an integrative approach - from genomics to ecology - to study health and social behavior in bees. Together with other members of the Center for Pollinator Research, she is developing comprehensive approaches to improve pollinator health and reduce declines, and coordinates networks of researchers, stakeholders, educators and policymakers to address these issues

**Dr. Lynn Dicks, NERC Research Fellow; School of Biological Sciences,
University of East Anglia, England**

Lynn Dicks is an internationally-respected scientist and currently a NERC Research Fellow at the University of East Anglia, UK focused on bee ecology and conservation. She is part of UK- and Europe-wide projects addressing bee conservation in farmland, and has significant experience presenting research to legislators to inform policy decisions. Dicks was a recipient of the 2017 John Spedan Lewis Medal for contribution to insect conservation.

Other Speakers Include

Claudio Gratton, Professor, Department of Entomology, University of Wisconsin-Madison

Jeremy Kerr, Professor, Department of Biology, University of Ottawa, Ontario, Canada

Quinn McFrederick, Assistant Professor, Department of Entomology, UC Riverside

Scott McArt, Assistant Professor, Department of Entomology, Cornell University

Maj Rundlöf, International Career Grant Fellow, Department of Biology, Lund University, Sweden

Juliette Osborne, Professor and Chair, Applied Ecology, University of Exeter, England

Maggie Douglas, Assistant Professor, Environmental Studies, Dickinson College

Sponsorship Opportunities

Sponsors at the Silver level and above receive complimentary admission to the International Pollinator Conference.

| Opportunity | Platinum > \$10,000 | Gold \$5,000 | Silver \$3,000 | Bronze \$1,000 | Virtual \$500 |
